DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

Claims 1-5, 8-23, 25-31 are rejected under 35 U.S.C. 102(a) as being anticipated by Zheng et al. (Zheng), article entitled, Toward Single Molecule Manipulation with Dielectrophoresis Using Nanoelectrodes.

The Zheng reference discloses the claimed method and apparatus for manipulating a polarizable object comprising a first nanotube electrically coupled with a first time varying voltage source and a second nanoelectrode electrically coupled with a second voltage source (see abstract). The reference further treats the same types of material, uses the same types of electrodes and the function of the polarizable object as a rotor (see the fourth page).

Accordingly, since the Zheng reference discloses each and every limitation, the claims are anticipated.

It is noted that the article contains an additional author, thus making the inventive entity an “other” with respect to § 102. Further, the date of the article is taken from the bottom of the page as February/2003.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

Claims 32-33 and 57 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art is silent regarding the use of carboxyl groups at the ends of the carbon nanotubes or the formation of the DNA-PNA duplex.
